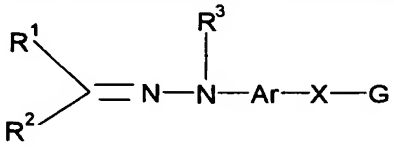
ABSTRACT

A compound represented by the following formula (I):



(I)

wherein R^1 represents hydrogen, aryl which may have a substituent, a saturated or unsaturated 5- to 7-membered heterocyclic group which may have a substituent, *etc.*; R^2 represents hydrogen, aryl which may have a substituent, a saturated or unsaturated 5- to 7-membered heterocyclic group which may have a substituent, *etc.*; R^3 represents hydrogen, *etc.*; Ar represents a divalent group derived from aromatic hydrocarbon, *etc.*; X represents a single bond, linear or branched alkylene having from 1 to 3 carbon atoms which may have a substituent, *etc.*; and G represents halogen, a saturated or unsaturated 5- or 6-membered cyclic hydrocarbon group which may have a substituent, a saturated or unsaturated 5- to 7-membered heterocyclic group which may have a substituent, *etc.*, a salt thereof or a solvate thereof; and an agent for inhibiting aggregation and/or deposition of an amyloid protein or an amyloid-like protein, which comprises the compound, a salt thereof or a solvate thereof.
